

Many people often ask - what is a good headlight to buy?

Well obviously there are certain factors to take into account. For me personally, I have always enjoyed the smaller style that is not too big and bulky. The main reason for this is that while I wear my headlight alot while hunting, I also use it around my home most days when out in the shed or working late.

Size and weight are crucial when I am on those long hunting missions. Walking for hours in the dark, the bulky headlights become a nuisance and are too heavy for my liking. There are many brands available to us now but the leading name is definitely Ledlenser, simply because of their long and successful history. The newest headlight added to my attire is the Ledlenser MH8, a great

headlamp that so far has more than suited my needs.

The MH8 has four settings; low, medium, high and boost, as well as a blink light setting and coloured light option. The unit is simple to use and operates well in all the circumstances required. You can set it on low for around camp or on full beam in the field for distances of up to 200 metres.

The beam can be adjusted by twisting a rotating lens, taking it from a wide-angle light to a strong straight beam.

The MH8 has a very efficient battery life and offers two options; rechargeable 3.7V lithium ion battery or 2 x AA batteries. The battery compartment is on the front, unlike most other models, and was easy to adapt to.

With three straps over your head; two on the sides and one on the top, the MH8 is very sturdy and easy to adjust to fit an individual's head.

The actual light unit itself can also be removed from the straps if needed, to make it easier to change batteries or to sit on a flat surface as a lamp.

My favourite feature was the ON button. Have you ever arrived into camp after a good slog only to find your headlamp has turned itself on and drained the battery.

The on-off button of the MH8 has now been designed so that you need to hold the button down in order to start it. This certainly eliminates the risk of accidentally knocking it on while it is sitting in your pack.

Offering Ledlenser's superior technology!

In summary, I was very impressed with the MH8 and it performed as you would expect from an industry leader. This headlamp is very affordable and comes with a seven-year warranty. If you are in the market for a new headlamp, I would recommend giving the Ledlenser MH8 rechargeable a go.

Visit www.ledlenser.co.nz for more information.

Choose: Use it as a head-lamp or use it as a handheld light thanks to the removable lamp head.

Choose: to run your head-lamp either on the lithium ion rechargeable battery (included) or on two

standard AA batteries. The magnetic USB cable makes recharging a breeze.

Choose: between different colour options with red, green and blue LED colours available.

Choose: how to manage your battery life by choosing either the Energy saving or Constant current modes.

Choose: from five light options - high, medium, low, boost or blink.

Features:

- Smart Light Technology
- Advanced Focus System
- Rechargeable
- Detachable lamp head
- Red, Blue and Green LED option
- Tilttable lamp head
- Energy Status indicator Low Battery warning
- Detachable, washable headband
- Transport lock
- Magnetic contact point for USB cable

Meet your new favourite headlamp!

Enjoy maximum flexibility!
